Project Brief

Data Strategist

Instructions:

- This test is designed to simulate an end-to-end data science project flow in Mynt, from data engineering, analysis, modeling, and storytelling. We encourage creativity and technical rigor in approaching our business problems.
- You are free to use any tools of your choice.
- Please email all the relevant slides, code (or Git repository), and files to **edric.ramos@gcash.com**

Project: **Give Me The Next AAA Title**

The Internet Movie Database, imdb.com, is a website devoted to collecting movie data supplied by studios and fans. It claims to be the biggest movie database on the web and is run by Amazon. IMDb makes its data available publicly, with more information on the fields listed here.

You can use other data sources such as the MovieLens data set. Feel free to augment your data as well through web scraping or finding other relevant data sets.

If you are applying for the *Data Strategist* position:

- Prepare a presentation to convince the hypothetical management team of a movie studio (and their data scientists) deciding how to make the next AAA title
- Perform an exploratory analysis looking into the following questions:

    - What is the highest rated movie in 2020? How do we balance ratings and number of votes?
    - Who was the most popular actor in 2020?
    - What are the trends in user-movie preferences over the years?
- Define a metric that captures the notion of a ‘hit movie’; justify your metric in the context of a movie studio director looking to invest in building the next AAA title
- Build an interactive dashboard to visualize the data set **[optional]**
- **[Optional]** Build a model to predict the next AAA title using the given data plus other data you may think would be predictive
